

## SOFTY

### **DESCRIPTION**

No one likes for laundry to come out of the dryer stiff, rough, and foul scented. Constant washing with industrial detergents will, however, tend to produce these results. The addition of this product to the final rinse will reverse the detergent cycle. Special chelates tie up salts and other minerals, found in the water. Neutralizing agents counterbalance the alkaline residue from the detergents. Deodorants impart a fresh scent. With use of this product, laundry will be naturally soft, fluffy, and freshly scented.

### **INSTRUCTIONS**

AUTOMATIC DISPENSING SYSTEMS should be programmed to inject correct amounts of softener/sour into the final rinse water as follows:

200 pound capacity	8 to 12 ounces
75 pound capacity	4 to 6 ounces
35 pound capacity	2 to 3 ounces

Run a test load of troublesome laundry and observe results. Check cleanliness, alkaline or acidic residues and hand adjust components of system as necessary. Consult your equipment representative for specific instructions and applications set up.

### **FEATURES**

- Controls wrinkles and static charge
- Neutralizes alkaline residue
- Provides soft, fluffy laundry
- Helps remove harmful salts and minerals from wash water

### **SPECIFICATIONS**

Appearance:	Light Blue	pH:	1.00 - 2.00
Odor:	Pleasant	Biodegradable:	Yes
Specific gravity:	1.034	USDA Approval:	No
